

## IMPORTANT CONSIDERATIONS FOR YOUR GRAPPLE SELECTION

Do you want to add a grapple to your existing bucket or remove your bucket for a rake?

Do you have auxiliary hydraulic outlets? If not, see accessories for MP010 and MP020 - X-tra Valve Kits

What do you want to grab? Brush, Loose Hay, Round Hay Bales, Construction Debris?

What is your price range? You need to be price conscious but under sizing can be costly in the long run.

What is the lift capacity of your loader? Choose a grapple that weighs less than 50% of your lift capacity.

### IMPORTANT GRAPPLE FEATURES

The opening width may be the most important feature of a grapple. A wider opening means you can grab more material.

6" Spacing of tines is ideal. It sifts the dirt yet will hold smaller material like rocks.

Single Grapple or Double Grapple? Generally speaking, a double grapple is preferred to clamp down on uneven loads like brush while a single grapple may be preferred for picking up even material such as hay bales.

**NOTE: SEE THE GRAPPLE SELECTOR GUIDE FOR HELP IN SELECTING THE CORRECT GRAPPLE**

## **GRAPPLE SPECIFICATIONS**

Model Number / Description	Single Grapple	Double Grapples	Single Cylinder	Double Cylinders	Concealed Cylinders	Cylinder Guards	Hoses (plumbed)	Grapple Material	Rake Material	Number of Rake Tines	Spacing of Tines	Rake Width	Grapple Opening	Greased Pivot Points	Sub Soil Points	Weight (Lbs.)	Up to 50hp Tractors	50 to 100 hp	100+ hp
